

The Future of Power Generation

Introduction

Environmental factors such as global warming and pollution have provoked a debate about whether power generation should continue to rely on fossil fuel combustion. However, cost remains the key issue defining the viability of any power generation technology.

The Future of Power Generation: Costs of renewable and traditional technologies is a management report that outlines the current and future case for investment in traditional versus renewable energy. It provides an independent analysis of the key data to directly compare the investment case and future prospects of different power generation technologies.

In addition this report contains the results of a survey of senior energy industry executive opinion, providing a unique benchmark of how decision makers within the energy industry forecast the future of power generation. Identify the most competitive forms of power generation using this report's independent, expert analysis of the true costs of power generation.

The Future of Power Generation

Executive summary 10

Introduction	10
The traditional approach to costing generation	11
Historical costs	11
Lifecycle costs	12
Structural costs	13
Factors which distort the price of electricity	13
Conclusions	14

Chapter 1 An introduction to the cost of electricity 16

Introduction	16
Report structure	17

Chapter 2 The traditional approach to costing electricity generation

Introduction	20
Capital costs of power generation technologies	21
Australia	23
US	24
UK	25
Analysis of capital cost figures	26
Capacity factor	28
Financing capital cost	31
The cost of power	32
Levelized cost of electricity	32

Global levelized costs 34

Fuel cost and fuel risk 38

Chapter 3 Historical costs 42

Introduction 42

Technology costs 43

Financial costs 49

Operational and maintenance costs 51

The cost of fuel 53

Oil 54

Gas 55

Coal 58

Fossil fuel discount rates 59

Hedged gas prices 61

Risk and security 61

Chapter 4 Lifecycle costs 64

Introduction 64

Net Energy Analysis 65

Greenhouse gas lifecycle analysis 70

Other atmospheric emissions 74

Policy making 75

Chapter 5 Structural costs 78

Introduction 78

Renewable characteristics 78

Structural costs of renewable generation 79

Grid extension 80

Capacity credit and balancing 84

Market structural effects 89

Energy storage 91

Chapter 6 Factors distorting the price of electricity 96

Introduction 96

Types of subsidy 97

Tariff subsidies 98

Fuel subsidies 99

Externalities 102

Legislation, quotas and green certificates 104

Quotas 105

Feed-in tariffs 105

Other measures 106

Green certificates 106

Government policy 107

Chapter 7 Conclusions 109

List of Figures

- Figure 2.1: Global capital costs of power plants 22
- Figure 2.2: Country comparison of capital costs of selected power plants 26
- Figure 2.3: Typical capacity factors for power generating plants 29
- Figure 2.4: Present value of \$1m as a function of discount rate 33
- Figure 2.5: Typical global levelized power generation costs 35
- Figure 3.6: US Wind turbine costs, 1996-2030 45
- Figure 3.7: Photovoltaic production costs in the US, 1996-2003 47
- Figure 3.8: Cost of natural gas for electricity generation (US\$/10⁷kcal) 56
- Figure 5.9: Grid extension costs as a function of renewable penetration 82
- Figure 5.10: Balancing costs for 20% wind penetration and energy storage 92
- Figure 7.11: Relative competitiveness of power generation technologies now and in ten years 114
- Figure 7.12: Factors affecting the market price of green energy 115
- Figure 7.13: Factors affecting the uptake of renewable energy 117
- Figure 7.14: Factors affecting the future of fossil-fuel fired generation 119
- Figure 7.15: Significance of the proposed hydrogen economy for future electricity generation 123

Emerging Markets Online

GLOBAL ENERGY AND UTILITIES MARKET RESEARCH

Emerging Markets Online specializes in market research support for international business development executives.

Customized Consulting Services

Introduction

Emerging Markets Online (EMO) provides customized market research and consulting services for the energy, telecommunications and utilities sectors worldwide. EMO specializes in providing each customer with personalized market research and business development support. Our global team of consultants specializes in management consulting, marketing and distribution strategies, project finance, tender and bid support, supplier strategies, and partner facilitation.

Research and Consulting Services

When you are preparing for a specific project, EMO's team can help. We will work with you to identify and assess emerging market opportunities and challenges. EMO helps clients to:

- ⇒ Develop research initiatives with direct surveys of markets, competitors, prospective suppliers and government regulatory and procurement entities;
- ⇒ Perform due diligence and investigative research on specific companies;
- ⇒ Identify new business opportunities in regional and local markets;
- ⇒ Facilitate Joint Venture activities and identify prospective partners;
- ⇒ Provide assessments of sales and distribution channels;
- ⇒ Track competitor's activities;
- ⇒ Forecast market growth potential for products and services;
- ⇒ Analyze new trends in the industry;
- ⇒ Acquire strategic information on utility markets deregulation, liberalization and privatization initiatives;
- ⇒ Develop strategies for competitive tenders and bidding scenarios

Emerging Markets Online provides targeted research solutions to help you reach your business development goals.

Customized Consulting Services

Recent Consulting Projects

EMO has helped dozens of clients worldwide assess emerging market challenges and identify new growth opportunities. Here are a few examples of recent projects EMO has completed for our clients:

- ⇒ EMO advised the M&A director for a major multinational E&P corporation on how current LNG projects are structured and financed. This included an analysis of the mix of private finance, commercial finance, ECA and multilateral finance, and engineering finance in current projects. The assignment included a matrix of how current LNG projects are financed by participant and percentage. EMO also provided details of how key LNG projects were structured and financed in Egypt, Trinidad, Qatar, Oman, Baja Mexico, and Nigeria. Finally, we identified three major trends in the financing of LNG projects.
- ⇒ Consulted a major Russian oil and gas company on the practices of U.S. refinery operating companies. Performed a survey of refinery companies, detailing management practices, investment and purchasing activities, refinery manager roles and responsibilities, and downstream operations. Produced a report of recommendations for applying western practices in refinery management and operations to Russian firm.
- ⇒ Supported a major law firm with an in-depth assessment of South Africa's natural gas market. Produced a survey and a report of key players, existing operations, exploration activities, pipeline developments, major contracts, pricing mechanisms, and the outlook for downstream natural gas markets
- ⇒ Consulted a major U.S. pipeline company in its transition from an energy utility to a broadband telecom services and trading company. Activities include due diligence, competitor assessments, supplier surveys, and regulatory analysis.
- ⇒ Produced a due diligence assessment on a major electric and natural gas company's operations in Latin America
- ⇒ Created a market assessment for a major European utility regarding the market for power generation, transmission and distribution in eastern Europe
- ⇒ Identified prospective buyers for a cellular license for a Latin American country in support of a big-five consulting firm's representation of a Latin telecommunications operating company
